Safe Work Procedures 14

Before Commencing Work at the Site 14
During Field Work 15
Post-Work Procedure 15
Document Approval Signatures 16
Appendix A 16

Important:
This field work safety plan will aid supervisors who wish to conduct field work activities under the Carbonique project (UQÀM). This plan includes a review of operational activities to ensure effective controls are in place to prevent incidents, with a specific focus on first aid preparedness at all field sites.

1. Project Information

Date Field Work Safety Plan Prepared	2026-06-18
Faculty / Department	GEOTOP — UQÀM
Project Name	Carbonique — Greenhouse Gas Flux Monitoring in Quebec Wetlands
Principal Investigator	Michelle Garneau (garneau.michelle@uqam.ca) +1 (514) 987-3000 x1933
Field Technician	David Ulises Trejo Cancino (trejo_cancino.david_ulises@uqam.ca) +1 (514) 775 4055
Institution / Organization	Université du Québec à Montréal (UQÀM)
Number of Participants on Site	Minimum 2; up to 6 people depending on trip type
Field Work Activity Summary	**Maintenance trips**: 2 participants — tower inspection, data collection (USB), sensor cleaning/calibration **Installation trips**: 2–6 participants — scaffolding tower erection, guy wires, solar panels & batteries, instrument mounting
Site Supervision Summary	**Maintenance**: groups ≥2; at least one experienced participant per site **Installation**: groups ≥2; supervised by experienced UQÀM technician (David U. Trejo Cancino) **Chamber sampling**: pairs; at least one experienced participant per pair; trip supervised by Level 1 first aid holder

2. Field Work Site Information

Date of Departure	**Maintenance trips**: bi-weekly to monthly as needed; dates dependent on weather and maintenance needs **Installation trips**: regular trips until installation complete; weather-dependent
Date of Return	Maintenance trips last one day only — same-day return. Installation trips are longer. The days on the field depends on the difficulties of the installation.
Number of Days on Site	**Maintenance trips**: variable depending on needs **Installation trips**: variable depending on progress
Name of Field Work Sites	**Flux Tower Sites**: - UQAM_1 (Lac Saint-Pierre Disturbed Marsh) - McGill_1 (Lac Saint-Pierre Restored Marsh) - UQAM_2 (Lac-à-la-Tortue Open Bog) - UQAM_3 (Lac-à-la-Tortue Forested Bog) - UQAM_4 (St-Rémi Disturbed Peatland) - UQAM_5 (Baie St-François Natural Marsh)
Address of Site or GPS Location	See Table 1 below for GPS coordinates and access instructions
Description of Sites	UQAM_1: Adjacent to farmland near Lac Saint-Pierre — open disturbed marsh McGill_1: Floating platform on restored marsh at Lac Saint-Pierre — water immersion risk UQAM_2: Open peatland bog at Lac-à-la-Tortue — uneven terrain, was struck by lightning UQAM_3: Forested bog at Lac-à-la-Tortue — uneven terrain, tower installation UQAM_4: Disturbed forested peatland near St-Rémi - adjacent to farmland UQAM_5: Natural marsh at Baie St-François – High platform installation, risk of terrain flooding

Table 1. GPS Coordinates, Access Instructions, and Nearest Hospital by Site

Site ID	Site Name	Latitude	Longitude	Access Notes	Nearest Hospital
UQAM_1	Lac St-Pierre Disturbed Marsh	46°09'52.1"N	72°41'06.3"W	Park the car right in front of the tower, next to the ditch.	Centre Christ Roi (~11 km, 9 min)
McGill_1	Lac St-Pierre Restored Marsh	46°08'56.5"N	72°43'38.3"W	Get the key from the reserve gatekeeper.	Centre Christ Roi (~16.3 km, 13 min)

UQAM_2	Lac-à-la-Tortue Open Bog	46°31'54.0"N	72°38'41.3"W	Park the car on the main road and walk under the power lines, in the forested bog and then in the open bog.	Hôpital Centre-De-La-Mauricie – Urgence (~11.3 km, 15 min)
UQAM_3	Lac-à-la-Tortue Forested Bog	46°31'40.4"N	72°38'46.3"W	Park the car on the main road and walk under the power lines and in the forested bog.	Hôpital Centre-De-La-Mauricie – Urgence (~11.3 km, 15 min)
UQAM_4	St-Rémi Disturbed Peatland	45°14'45.2"N	73°40'56.3"W	Leave the truck at the border of the cornfield.	Hôpital Anna-Laberge, Châteauguay (~23,8 km, 23 min)
UQAM_5	Baie St-François Natural Marsh	46°05'19.9"N	72°55'06.5"W	[Access instructions TBD]	Hôtel-Dieu de Sorel, Sorel-Tracy (~33.3 km, 35 min)

3. Field Work Participant Contact Information

Name	Position	Email	Contact Number (Cell)
Michelle Garneau	Principal Investigator	garneau.michelle@uqam.ca	+1 (514) 987-3000 x1933
Scott J. Davidson	Principal Investigator	davidson.scott_j@uqam.ca	[phone]
David Ulises Trejo Cancino	Lead Technician	trejo_cancino.david_ulises@uqam.ca	+1 (514) 775-4055
Chloe Kaplan	Technician	chloe.kaplan@mcgill.ca	+1 (917) 864-0605
Martina Schlaipfer	Project Coordinator	schlaipfer.martina@uqam.ca	+1 (514) 987-3000 x20207
Léonie Perrier	Project Coordinator	perrier.leonie@uqam.ca	+1 (514) 987-3000 x20317
Michaela de Melo	Investigator	ladeira_de_melo.michaela@uqam.ca	+1 (438) 337-0018

4. Transportation

	Transportation To/From Site	Transportation On Site
Mode of Transportation	Vehicle (UQÀM fleet or personal)	Walking
Details of Vehicle	[UQÀM vehicle description — TBD; 4WD recommended for remote bog access] Personal vehicles may be used when needed	N/A
Source of Transportation	UQÀM fleet vehicles preferred; personal vehicles as backup	N/A

5. Communications

	Communication Within Group on Site	Communication with Outside
Mode of Communication	Participants will always remain within talking/shouting distance on site. Always maintain visual contact.	All participants carry a personal cell phone. A satellite communicator (e.g. Garmin inReach) must be carried at sites with limited or no cellular coverage. Check-in protocol: one member of the field crew will text one of the coordinators (1) when leaving UQÀM, (2) upon arrival at the site with GPS coordinates of the vehicle, (3) when finishing field work and returning to the vehicle, and (4) upon return to UQÀM.
Phone / Equivalent Number	N/A — visual contact maintained	Martina Schlaipfer: +1 (514) 776-8245 Léonie Perrier: +1 (514) 742-4588 David U. Trejo Cancino: +1 (514) 775-4055
Frequency of Communication	Continuous — visual contact	Beginning and end of day + as needed

6. Field Work Itinerary

Trip Type / Date	Time	Activity
Maintenance Trips	7:30 AM	Leave UQÀM in field vehicle. Text coordinator to confirm departure.
---	~10:00 AM	Arrive at site. Text coordinator with GPS coordinates of vehicle. Walk to flux tower.
---	10:30 AM – 3:30 PM	Perform tower inspection, data collection, sensor cleaning, calibration, filter replacement as needed.
---	~4:00 PM	Return to vehicle. Text coordinator to confirm departure from site. Return to UQÀM.

7. Training Requirements

Name	Position	Training/Course/Procedure	Completed ☒
David Trejo	Technician	Level 1 First Aid (CNESST-recognized)	☒
David Trejo	Technician	SIMDUT 2015 / WHMIS (if chemical use)	☒
All participants	All roles	Review of this Field Work Safety Plan and First Aid Protocol	☒
All participants	All roles	Pre-trip safety briefing before each field campaign	☒

8. Materials / Equipment

Equipment / Tool / Material / PPE	UQÀM / Rental / Personal	SOP Available? (Y / N / N/A)
EMERGENCY & PROTECTIVE EQUIPMENT		
First Aid Kit (Level 1 — CNESST compliant)	UQÀM	See First Aid Section
Personal Flotation Devices (PFDs) — mandatory at McGill_1	UQÀM	N/A
Throw rope / rescue ring (McGill_1)	UQÀM	N/A
Satellite communicator (Garmin inReach or equivalent)	UQÀM	N/A
Fire extinguisher (5 lb. ABC)	UQÀM	Participants trained on use
Hard hats (installation trips and tower work)	UQÀM	N/A
FOOTWEAR & CLOTHING		
Hip waders or rubber boots (marsh/bog sites)	UQÀM / Personal	N/A
Steel-toe boots (installation trips)	UQÀM / Personal	N/A
Antistatic work clothing (cotton preferred)	Personal	N/A
Rain gear / extra dry layers	Personal	N/A
Snowshoes	UQÀM / Personal	N/A
Hand/foot warmers	UQÀM	N/A

PERSONAL ITEMS & NAVIGATION		
Sun protection (hat, long sleeves, sunscreen)	Personal	N/A
Insect repellent (DEET 30% or Icaridin)	UQÀM / Personal	N/A
Tick removal tool	UQÀM / Personal	N/A
Personal communication device (cell phone)	Personal	N/A
Backup battery pack	UQÀM	N/A
Compass / GPS device	UQÀM	N/A
Flagging tape	UQÀM	N/A
Flashlight / headlamp	Personal	N/A
Knife	Personal	N/A
FIELD TOOLS		
Screwdrivers, hammers, wrenches, hex keys, wire cutters/crimpers, pliers	UQÀM	N/A
Sleds	UQÀM	N/A
Consumables (Ferrules, fuses, etc)	UQÀM	N/A
Cables and sensors	UQÀM	N/A
USB sticks for data collection	UQÀM	N/A
Syringes (flux chamber sampling)	UQÀM	N/A
Soil moisture / temperature probes	UQÀM	N/A

⚠ **Note on Chemical Handling —** If methanol is used or transported as part of field activities, refer to the companion document: ***Methanol Handling Procedure and Protocol***. That document covers indoor and outdoor handling, ventilation requirements, PPE, TDG transport obligations, and emergency response specific to methanol. It must be read and signed by any team member who handles methanol before doing so. Both documents must be available at the worksite simultaneously.

9. Other Important Information

Incident Reporting

As per CNESST and UQÀM protocols, all incidents and accidents must be reported to the supervisor (Michelle Garneau / David U. Trejo Cancino) and to UQÀM's health and safety office as soon as possible following the incident.

- Serious injuries must be reported to CNESST immediately (LSST art. 62); other injuries within 6 days
- Environmental releases must be reported to Urgences-Environnement Québec: 1-800-463-4311
- All incidents — including near-misses — must be documented in writing and kept on file for a minimum of 5 years
- Incident reports must be submitted to Michelle Garneau within 24 hours; CNESST report completed by the injured person or their supervisor

Site Access – Prime Contractor / Landowner Communication

Prior to visiting each site, the team must confirm access authorization with the relevant landowner or manager. Contact details are to be confirmed by the PI before the field season begins.

- UQAM_1, McGill_1, UQAM_5 (Lac Saint-Pierre area): confirm access with [landowner/manager — TBD]
- UQAM_2, UQAM_3 (Lac-à-la-Tortue): confirm access with [landowner/manager — TBD]
- UQAM_4 (St-Rémi): confirm access with [landowner/manager — TBD]
- Check-in and check-out with the site contact is required on each visit day

10. Risk Assessment

Key Activity / Task	Hazards & Possible Outcomes	Pre-Control Consequences	Pre-Control Likelihood	Pre-Control Risk Level	Controls	Post-Control Consequences	Post-Control likelihod	Residual Risk Level
Walking to/from sites	Tripping on uneven bog/marsh terrain; cuts, scrapes, sprains	Minor	Moderate	Low	Work in pairs; appropriate footwear (waders/rubber boots); stay on designated paths; carry first aid kit	Minor	Low	Low
Working on floating marsh platform (McGill_1)	Falling into water; drowning; cold shock	Severe	Moderate	High	PFDs mandatory for all; throw rope on site; work in pairs; never work alone on platform	Moderate	Low	Low
Site installation (tower erection, guy wires)	Injury from dropping heavy objects; cuts from wire; tool injuries	Moderate	Low	Moderate	Lift in pairs; wear gloves & steel-toe boots; experienced supervision (D. Trejo Cancino); carry first aid kit	Minor	Low	Low
Tower maintenance / climbing scaffolding (<3 m)	Falling from scaffolding; tool injuries	Moderate	Low	Low	Only experienced participants climb tower; non-slip	Minor	Low	Low

					footwear; harness if >3 m; work in pairs			
Hot weather / direct sun exposure	Heat exhaustion; heat stroke	Moderate	Moderate	Moderate	Schedule work in early morning; regular water breaks (500 mL/hr); work in shade/canopy when possible; first aid kit on site	Minor	Low	Low
Cold/wet weather; soaked clothing	Hypothermia	Moderate	Moderate	Moderate	Carry dry clothing in waterproof bag; rain gear; chest waders; avoid work in severe rain; first aid kit	Minor	Low	Low
Insect exposure (ticks, bees, wasps)	Lyme disease; anaphylaxis	Severe (anaphylaxis)	Low	Moderate	DEET/Icaridin repellent; full tick check at end of day; EpiPen for known allergic participants; first aid kit	Minor	Low	Low
Electrical storm	Lightning strike	Severe	Low	Moderate	Monitor weather forecast; leave site immediately at first thunder; take refuge in vehicle; no work near tower during storm	Minor	Low	Low
Chamber gas sampling (syringe use)	Needle stick; accidental gas exposure	Minor	Low	Low	Training on syringe use before first sampling; work in pairs; report all needle sticks immediately	Minor	Low	Low

11. Emergency Contact Information

UQÀM-Specific Contacts

Department Contact (not on site)	Sciences de la Terre et de l'Atmosphère main office
Department Contact Phone	+1 (514) 987-4194
UQÀM Safety Office (Bureau de la sécurité)	+1 (514) 987-3101

Field Site Emergency Contacts

Local Contact (First Aider on Site)	David Ulises Trejo Cancino — +1 (514) 775-4055
Project Coordinators	Martina Schlaipfer — +1 (514) 776-8245 Léonie Perrier — +1 (514) 742-4588
Local Emergency Response	911 ☒ — available at all sites
Nearest Hospital — UQAM_1 & McGill_1	Centre Christ Roi
Nearest Hospital — UQAM_2 & UQAM_3	Hôpital Centre-De-La-Mauricie-Urgence, Shawinigan-Sud
Nearest Hospital — UQAM_4	Hôpital Anna-Laberge, Châteauguay
Nearest Hospital — UQAM_5	Hôtel-Dieu- de Sorel, Sorel-Tracy
Centre antipoison du Québec	1-800-463-5060
Urgences-Environnement Québec	1-800-463-4311
Info-Santé (non-emergency nurse line)	811
CNESST (incident reporting)	1-844-838-0808

13. First Aid

Number of Participants (workers, students)	2–6 on any given trip
Hazard Level in the Workplace	Low to Moderate (wetland field conditions)
Types of Injuries Likely to Occur	Cuts, scrapes, sprains, insect bites, heat stress, hypothermia, fall injuries; water immersion risk at McGill_1
Barriers to Providing First Aid	Site conditions (boggy terrain, floating marsh, remote location) may slow access and evacuation; some sites >20 minutes from hospital
Transportation to Hospital	**UQAM_1 & McGill_1 → Centre Christ Roi**: ~9–13 min drive + walk to vehicle **UQAM_2 & UQAM_3 → Hôpital Centre-De-La-Mauricie**: ~15 min drive + walk to vehicle (>20 min total) **UQAM_4 → Hôpital Anna-Laberge**: ~23 min drive + walk to vehicle (>20 min total) **UQAM_5 → Hôtel-Dieu de Sorel**: ~35 min drive + walk to vehicle (>20 min total)

	All sites: call 911 first for life-threatening emergencies
Required Supplies & Equipment	**All trips**: Level 1 First Aid Kit (CNESST-compliant); PFDs at McGill_1 **Installation trips**: Level 1 kit + certified first aider strongly recommended for groups >4 **Maintenance trips**: Level 1 kit **Chamber sampling trips**: [TBD]
First Aid Attendants (Level of Training)	David Ulises Trejo Cancino — [Level TBD] [Additional certified participant TBD per trip — see Section 8]

First Aid Kit — Minimum Required Contents (CNESST Level 1)

Item	Minimum Quantity
First aid manual — bilingual (FR/EN)	1
Nitrile examination gloves (pairs)	6
CPR face shield / pocket mask	1
Sterile gauze pads 10×10 cm	12
Sterile gauze roll bandage (assorted)	4
Adhesive bandages (assorted)	20
Triangular bandage / sling	2
Elastic (tensor) bandage 7.5 cm	2
Wound closure strips (steri-strips)	1 pack
Medical adhesive tape	1 roll
Sterile eyewash saline 500 mL	1
Antiseptic wipes / solution	10
Thermal emergency blanket	2
SAM splint	1
Trauma scissors (blunt-tip)	1
Tweezers	1
Instant cold pack	2
Tick removal tool	1
EpiPen — if any team member has known severe allergy	As required
Emergency contacts list (laminated, printed)	1
Waterproof notepad and pen for incident recording	1

Site-Specific First Aid Considerations

- McGill_1 (floating marsh): PFD mandatory; throw rope on site; treat any immersion as potential hypothermia risk regardless of air temperature
- UQAM_2 & UQAM_3 (bog sites): high tick and insect activity — perform full tick check at end of each field day; carry and know how to use tick removal tool
- All remote sites: cell coverage may be limited — pre-load hospital GPS coordinates into vehicle navigation before departure; carry satellite communicator
- For any participant with a known severe allergy: EpiPen must be in the first aid kit and its location known to all team members before departure

14. COMMUNICABLE DISEASE PREVENTION

A communicable disease is an illness caused by an infectious agent or its toxic product that can be transmitted in a work, research, or academic environment from one person to another (e.g., influenza, COVID-19, norovirus).

Question	Yes	No	N/A	Details
Have communicable disease entry/exit requirements been identified and addressed?	☐	☐	☒	*No specific entry requirements for field sites at this time.*
Have all participants been directed to complete a daily health check, wash hands, and not attend if symptomatic?	☒	☐	☐	*Daily health checks are conducted before departure. Participants must not attend if they have fever or symptoms of illness.*
If a participant develops symptoms on site, is there a plan to ensure they are safely transported home?	☒	☐	☐	*Trips are single-day. If a participant becomes symptomatic or incapacitated, they will be transported home in the lab vehicle. Others in contact will self-monitor.*
Will there be access to testing kits and/or required vaccination records?	☒	☐	☐	*Testing kits available upon request from PI. Vaccination status to be managed per UQÀM institutional policy.*
Is self-isolation or quarantining required for any communicable disease?	☒	☐	☐	*All trips are <1 day. Participants who need to isolate do so at home without being in contact with others.*

15. Emergency Procedures

List of Potential Emergencies	#1 Environmental Hazards 1.1 Wildfire 1.2 Electrical Storm / Lightning 1.3 Windstorm 1.4 Flooding / Rapid Water Rise #2 Work Hazards 2.1 Injury While Working 2.2 Water Immersion / Near-Drowning (McGill_1) 2.3 Heat Exhaustion / Heat Stroke 2.4 Hypothermia / Cold Exposure 2.5 Anaphylaxis 2.6 Tick Bite

#1 Environmental Hazards

#1.1 Wildfire

Do not attempt to fight the fire beyond the capabilities of equipment at hand (fire extinguisher). Leave the site immediately. Report to 911 and the appropriate provincial authority. If safe to do so, wait at the access point for fire authorities.

- Provincial Fire Reporting: 1-800-663-5555
- Local fire department: 911

#1.2 Electrical Storm / Lightning

As soon as thunder is heard, descend from the flux tower immediately. Take refuge in the vehicle if possible. If away from the vehicle in an open bog, minimize your profile — crouch or lie flat; move away from the tower, isolated trees, and water. Do not resume work until 30 minutes after the last thunder.

#1.3 Windstorm

Leave the work site immediately if branches or debris are falling. If in doubt about wind safety, suspend work. Do not attempt to work on or near the tower in high winds.

#1.4 Flooding / Rapid Water Rise

If water levels rise unexpectedly at marsh or bog sites, move immediately to higher ground and return to the vehicle. Do not cross flooded ditches or trails on foot. Contact PI and 911 if evacuation is needed.

#2 Work Hazards

#2.1 Injury While Working

Perform first aid (see certified first aiders in Section 8 and kit in Section 13). Call 911 for emergencies. See Section 2 for site GPS coordinates and nearest hospital. Document the incident as per Section 10.

#2.2 Water Immersion / Near-Drowning (McGill_1)

Call 911 immediately. Remove the person from the water safely — do not put yourself at risk; use the throw rope. Begin CPR if unresponsive and not breathing. Treat for hypothermia: remove wet clothing, wrap in thermal blanket. Transport to hospital even if the person appears recovered (secondary drowning risk).

#2.3 Heat Exhaustion / Heat Stroke

Stop work, move to shade or vehicle, rest, and provide water. Heat exhaustion: apply cool wet cloths, monitor closely; call 911 if no improvement in 15 minutes. Heat stroke (hot/red skin, no sweating, confusion): call 911 immediately and cool the person rapidly with available means.

#2.4 Hypothermia / Cold Exposure

Stop work and move participant to vehicle or warm environment. Remove wet clothing gently. Wrap in thermal blanket. Provide warm (not hot) non-alcoholic fluids if conscious. For severe hypothermia (loss of consciousness, very slow breathing): call 911; handle very gently; do not rub limbs; begin CPR only if no pulse and breathing absent.

#2.5 Anaphylaxis

Call 911 immediately. Administer EpiPen to the outer thigh. Keep the person lying down with legs elevated. Be prepared to administer a second dose after 5–10 minutes if no improvement. Begin CPR if the person becomes unresponsive.

#2.6 Tick Bite

Remove the tick as close to the skin as possible using the tick removal tool — do not twist or crush. Disinfect the area. Record the date and site. Monitor for rash or flu-like symptoms over the following 30 days. Consult a physician if symptoms develop (Lyme disease risk in Quebec peatland sites).

16. Safe Work Procedures

Before Commencing Work at the Site

Confirm all participants are medically and physically able to perform field work activities for the day.

- Conduct a pre-job safety briefing covering:
  - Hazards and controls from the risk assessment (Section 11)
  - Site map review and route to nearest hospital

  - Weather forecast and environmental conditions for the day
  - Itinerary of the day and planned activities
  - Communication protocol (check-in texts to PI)
  - Mandatory PPE for the trip type and site
  - Incident reporting procedure
  - Emergency procedures and first aider identity
  - On chamber sampling trips: confirm each pair knows their plots and who to report to
- Safety Gear Checklist (confirm before departure):
- First aid kit (inspected and replenished)
- PFD for each participant (McGill_1 only)
- Satellite communicator (low-coverage sites: UQAM_2, UQAM_3, UQAM_4)
- Footwear: hip waders, rubber boots, or steel-toe depending on site and task
- Sun protection (hat, long sleeves, sunscreen)
- Insect repellent and tick removal tool
- Personal cell phone charged and carrying emergency contacts
- Backup battery pack
- Compass / GPS device
- Flagging tape, flashlight, knife
- Fire extinguisher (5 lb. ABC)
- Hard hats and safety eyewear (as needed for installation trips)
- Confirm appropriate tools and supplies are packed for the task.
- Check in with PI by text before departure.

During Field Work

- Upon arrival: text coordinator with GPS coordinates of research vehicle.
- Walking to/from sites: check weather conditions; maintain pairs at all times; stay on designated paths or flagged routes.
- Installation work: visually assess site for hazards before starting; communicate plan between all participants; supervise with D. Trejo Cancino.
- Tower maintenance: inspect tower visually for structural hazards; only experienced participants climb; collect data and perform maintenance tasks.
- Chamber sampling: pairs stay in visual contact; confirm sampling plan and timing before pairs separate.
- Report any new or unexpected hazards immediately to the supervisor on site.

Post-Work Procedure

- Perform a tick check on all participants before entering the vehicle (N/A during winter)

- Return to vehicle; text PI to confirm departure from site.
- Unload and properly store all equipment and gear upon return.
- Park vehicle, record mileage, return keys as per UQÀM fleet policy.
- Report any incidents (Section 10) and replenish first aid kit as needed for the next trip.

17. Document Approval Signatures

This Field Work Safety Plan has been shared with all staff and participants through email and is available as a shared document. Staff and students must either provide a signature or email confirmation confirming they have received, read, and understood the contents of the plan.

Name	Role	Signature	Date
Michelle Garneau	Principal Investigator		
David U. Trejo Cancino	Supervisor / Technician		
Martina Schlaipfer	Project Coordinator		
Léonie Perrier	Project Coordinator		

Participant Confirmation of Understanding

By signing below, each participant confirms they have been informed of and/or provided with a copy of this Field Work Safety Plan, understand the hazards identified, agree with the control measures, and have discussed any relevant medical and physical requirements with the supervisor.

Participant Name	Position / Role	Email	Signature	Date

Appendix A: Definitions and Responsibilities

Definitions

- Administrative Controls: The modification of work processes or activities to minimize risk
- Engineering Controls: The modification of the physical work environment to minimize risk
- Hazard: A potential source of harm that can lead to injury or occupational disease
- Risk: The chance of injury or occupational disease
- Risk Assessment: The process of identifying hazards, evaluating their risk, and determining controls to eliminate or minimize that risk
- Supervisor: The person directly responsible for overseeing the tasks of the worker
- Worker: All students, staff, and researchers conducting field work under this plan

Responsibilities

Principal Investigator (Michelle Garneau)

- Review and approve this Field Work Safety Plan before each field season
- Ensure all participants have received this plan and completed required training before the first field trip
- Receive all incident reports and coordinate CNESST reporting as required
- Ensure adequate first aid resources are available for each trip type

Field Supervisor / Technician (David U. Trejo Cancino)

- Conduct risk assessments for specific tasks and communicate hazards before commencing work
- Supervise all installation trips and ensure safe work procedures are followed
- Ensure workers have access to required documentation (SDS, procedures, emergency contacts)
- Educate workers on emergency procedures and first aid response before each trip

Workers / Students / Participants

- Read, understand, and follow this Field Work Safety Plan
- Complete all required training before commencing field work
- Use proper PPE as required for each trip type and site
- Report any unsafe conditions to the supervisor immediately
- Report all incidents and near-misses to the PI within 24 hours
- Perform daily health checks before attending field trips

This plan must be reviewed annually or following any incident. A printed copy must be kept in the field vehicle at all times. All participants must sign Section 17 before their first field trip of each season.

Prepared in compliance with: LSST (c. S-2.1) • RSST (c. S-2.1, r. 13) • CNESST First Aid Guidelines • SIMDUT 2015 •
